

Illustration 1: How to Measure Size Chart

Sleeve Length:

Hold the arm at right angle out in front of the body and then bend the elbow another 90 degrees, creating a box shape in front of the body, with the forearm parallel to the chest. The measurement is then taken from the top of the spine around the shoulder and elbow bends to the wrist, head facing forward.

Center Back Measurement:

Measure from top of spine to waist, tie something about waist to define, head facing forward. This is from the bottom neck point to natural waistline; not jeans waist. It is the narrowest part.

Finished Jacket Length:

How long you would like the jacket to be in the back.
